SUMMARY

MSc Computer Science graduate (1:1 Honours) and Software Engineer with 2 years of professional experience specializing in Java Spring Boot, Python, and AWS. Proven track record in building scalable backend infrastructure, RESTful microservices, and AI-driven automation. Proven experience in orchestrating agentic workflows, implementing RAG pipelines, and integrating LLMs (OpenAI/Claude) to solve complex enterprise challenges.

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| University of Galway,                                                                                                                                                   | September 2024 –        |
| MSc in Computer Science: Data Analytics (1:1 Honours) Galway, Ireland                                                                                                   | November 2025           |
| Key Modules: Statistics for Data Science, Data Visualization, Information Retrieval, Machine Learning, Python Programming, Tools for Big data analytics, Deep Learning. |                         |
| Thadomal Shahani Engineering College, University of Mumbai                                                                                                              | August 2017 – June 2021 |
| Bachelor of Engineering in Information Technology (7.14 CGPA/ 1 st class) Mumbai, India                                                                                 |                         |
| Key Modules: Database Management Systems, Data Structures and Algorithms, Web Technologies, Software Engineering, Artificial Intelligence, Computer Networks.           |                         |

SKILLS

**Programming Languages:** Python, SQL, R, Java, Node.js, HTML, CSS, C++ (Exposure)  
**Cloud Platforms:** AWS (Lambda, S3, EC2, API Gateway, Redshift), Docker, GitHub Actions (CI/CD), Maven, JUnit, Jenkins.  
**AI & Backend:** Spring Boot, Spring Data JPA, Hibernate, LLM Integration (OpenAI/Claude), Agentic Orchestration (Antigravity/n8n), RAG, Prompt Engineering, MCP(Knowledge).  
**Databases:** PostgreSQL, MySQL, Oracle Database.  
**Enterprise Tech:** Adobe Experience Manager (AEM), OSGi Bundles, Sling Models, HTL, RESTful APIs.

| <b>Integrating Gann Theory (a trading technique) into RL Frameworks (Thesis)</b><br><b>Galway, Ireland</b> <ul style="list-style-type: none"><li>• Research Objective: Conducted original research to evaluate if century-old geometric mathematics (Gann Square) could serve as high-value decision-support signals for Reinforcement Learning (RL) agents in volatile environments.</li><li>• Methodology &amp; Innovation: Engineered a custom research pipeline to transform Gann’s Square of Nine levels and Gann Angles into dynamic time-series features.</li><li>• Architecture &amp; Testing: Developed a Deep Q-Network (DQN) Agent to move beyond simple prediction; the agent was trained to make autonomous "Buy/Hold/Sell" decisions based on geometric signals.</li><li>• Empirical Validation: Performed rigorous statistical analysis, including paired t-tests and ANOVA, to conduct the first empirical comparison between LSTM-only forecasting and a Gann-enhanced RL framework.</li><li>• Findings: Discovered a paradigm shift: while Gann features are noisy for price prediction, they provide superior "situational awareness," providing better trading decisions (win rates increased by 6 %)</li><li>• Technologies: Python (PyTorch), Deep Q-Learning (DQN), LSTM, Scikit-learn, Yahoo Finance API, Statistical Hypothesis Testing (ANOVA).</li></ul> | <b>May 2025 – August 2025</b> |
| <b>Antigravity-Powered Automated Job Search Engine</b><br><b>Galway, Ireland</b> <ul style="list-style-type: none"><li>• Pipeline Architecture: Engineered a automated pipeline that integrates Indeed scrapers with AI-driven scoring to prioritize high-value roles.</li><li>• AI Fit Scoring &amp; Tailoring: Developed a RAG-based scoring system that utilizes LLMs to evaluate job descriptions against candidate profiles, outputting a 0–100 match score.</li><li>• Dynamic Document Generation: Implemented an LLM module to extract must-have keywords and dynamically rewrite resume bullets into a tailored PDF for every application.</li><li>• Technologies Used: Antigravity (Agentic Orchestration), OpenAI (GPT-4o), Anthropic (Claude 3.5 Sonnet), RAG, GitHub Actions (CI/CD), and Docker (Containerization).</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>March 2026</b>             |
| <b>AI-Powered Technical Documentation (n8n &amp; GitHub)</b><br><b>Galway</b> <ul style="list-style-type: none"><li>• Configuration: Engineered an automated workflow in n8n that monitors GitHub repositories for code updates and triggers AI agents for real-time documentation generation.</li><li>• AI Integration: Configured LLM nodes to analyze Python script changes and automatically output structured Markdown User Guides to Notion.</li><li>• Process Improvement: Streamlined the documentation lifecycle, ensuring technical guides stay synchronized with software updates without manual intervention.</li><li>• Technologies Used: n8n (Low-code Automation), Webhooks, and Event-driven Architecture.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Feb 2026</b>               |
